Flu/Pneum Shot Sites	Flu Shot	Pneum Shot
TOTALS	866	6
Mon County Schools Flu/Pneum Shot Sites	Flu Shot	Pneum Shot
TOTALS	442	5
GRAND TOTALS	1,506	20

EKGs	Ultra-sounds	Achilles Bone	Pulmon PFT
186	1161	797	13

Table 1: Testing Conducted YTD at outreach sites

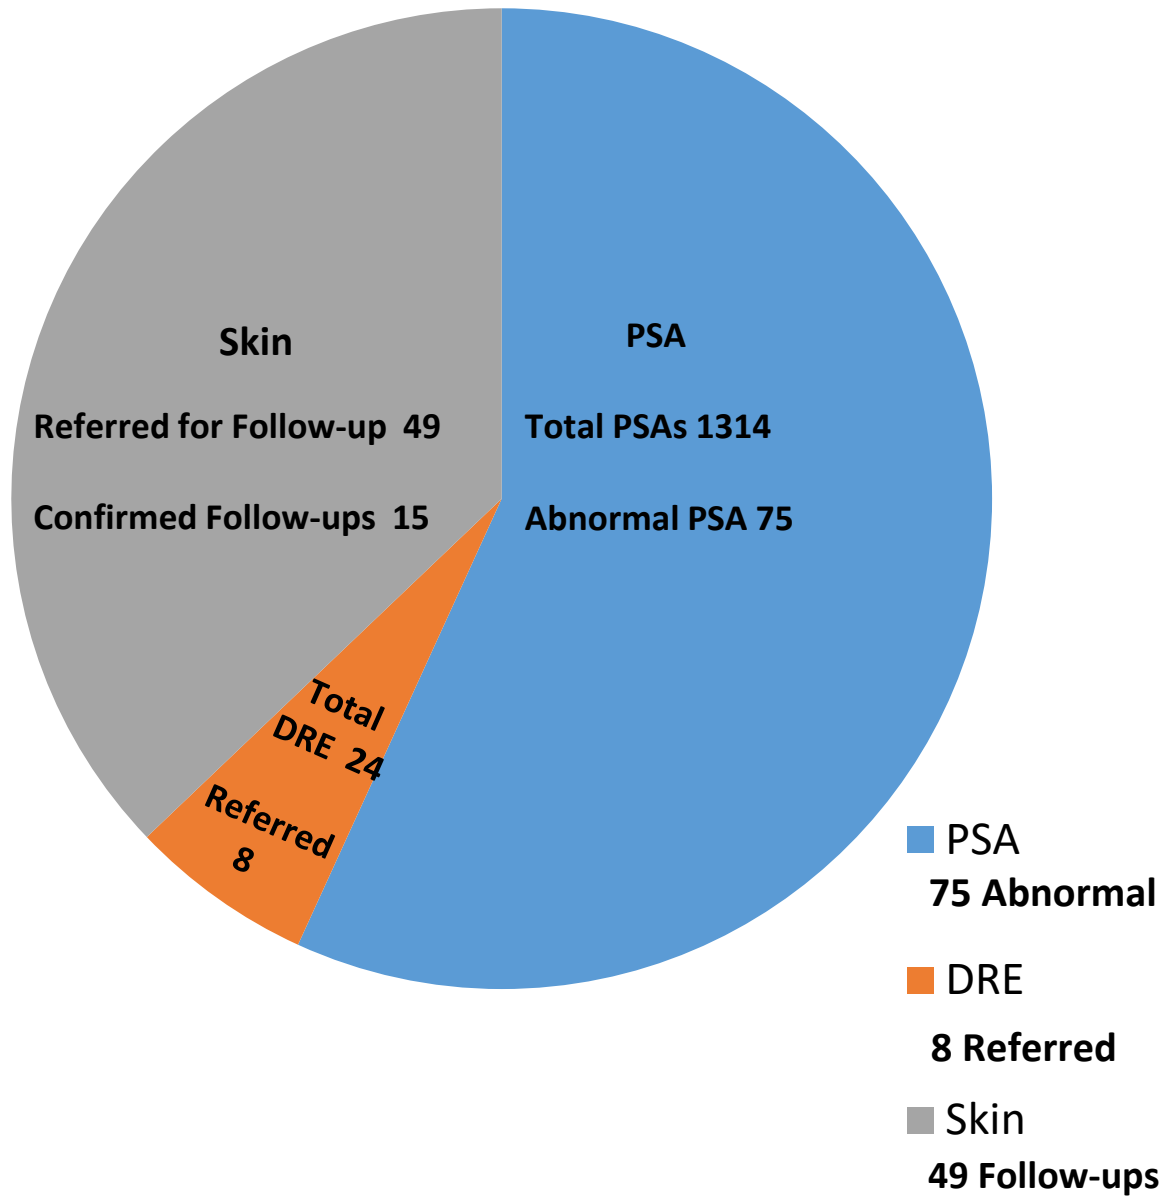

As seen in the above table, community and corporate outreach is a major endeavor of Mon Health Medical Center (MHMC). During the year over 40 community activities were conducted with 2 activities being large Health Fairs. Screenings were offered to both corporate and social clubs in our service areas with over 4,000 people participating in these screenings.

Additionally this fall MHMC launched its annual Fight the Flu Campaign providing both the Flu and Pneumonia shots to approximately 1500 participants.

Follow up for all lab work is offered and completed with either a PCP or the participant. Participants are asked for their PCP's so that data can be forwarded for review and follow up as needed. Pathology calls all critical values to PCP's as identified or to the individuals if no PCP is indicated. MHMC offers assistance to participants without PCP's in available PCP's with in the service area.

MHMC has taken additional steps to support our participant receiving PSA's, Skin screening and Digital Rectal Exam testing with positive results. Assistance in making referrals is offered to expedite follow up. YTD total screenings; PSA 1314, Digital Rectal Exams 26 and Skin Cancer screenings 142. Below is the actual follow up that was completed on positive respondents YTD. Both pathology and the Urologist support this effort and 133 positive follow ups have occurred as a direct result of our screening program.

Annual Community Cancer Screenings January - December 2018

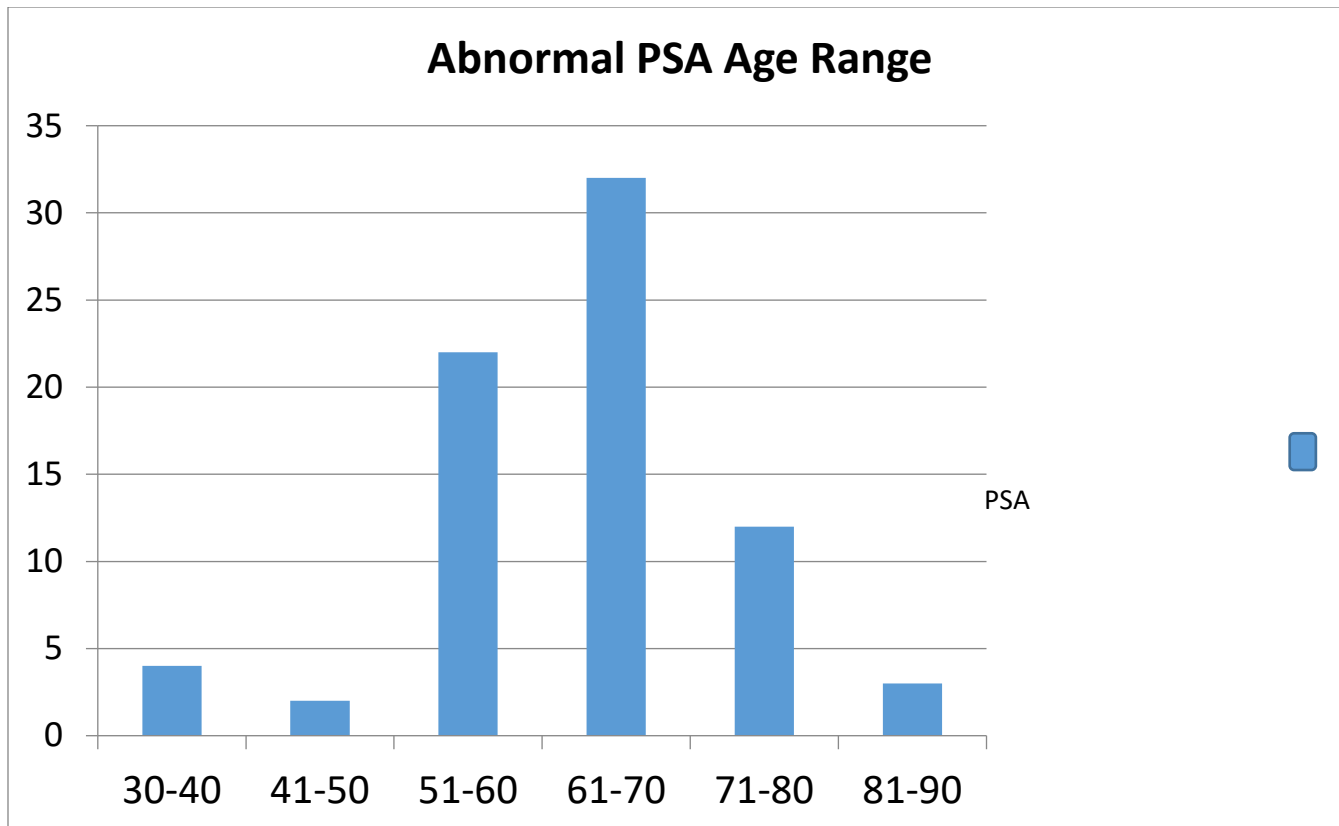

Table 2: Follow-ups made from screening YTD

To accomplish these results our Community outreach coordinator has pulled together a multidisciplinary team to facilitate testing, analysis and follow up. This team includes many members of the Mon Health Team including physicians, clinicians, and support staff.

Prostate Specific Antigen (PSA) is recommended for men age 50 and over and those with a family history of prostate cancer. In tracking the age range of men having abnormal PSA, this screening has proven that early detection can save lives.

Health Fair is an example where most of the Ambulatory Care Offices as well as hospital departments both clinical and support combine efforts to provide education and testing pertinent to our service areas healthcare needs.
